Memorandum

rfw
JPR

DATE : October 2, 1978

TO : A. A. Mandapat

FROM : Joe Recchi

SUBJECT : Storage Facilities for Polychlorinated Biphenyls (PCBs)

I have reviewed the report on storage facilities for PCBs and find it very complete. To insure that the Department is in compliance with EPA regulations, I request that you prepare a work order to the Engineering and Operations Divisions requesting that the existing facilities be modified with a new foundation and floor designed to contain leaks or spills and that the proper exterior markings be added for an estimated cost of \$3,000. The requested completion date should be December 31, 1978.

Until the existing facilities are modified, please insure that PCB equipment is not stored beyond 30 days from the date of removal from service as required by EPA regulations. As indicated in your report, the Department, in the past, has transported PCBs from Seattle to Murphy, Idaho, for a cost of \$1300 per trip. It is my understanding that you are reviewing the possibility of contracting out the transport of PCBs. Please continue with this review, making your recommendation for transporting procedures by October 10, 1978.
